Contents to volume 64

Computational physics	*Issue*	*Page*
Paetzold, O. Vectorization of diffusion of lattice gas without double occupancy	1	1
Müller-Plathe, F. and D. Brown Multi-colour algorithms in molecular simulation: vectorisation and parallelisation of internal forces and contraints	1	7
Chialvo, A.A. and P.G. Debenedetti On the performance of an automated Verlet neighbor list algorithm for large systems on a vector processor	1	15
Weniger, E.J. On the derivation of iterated sequence transformations for the acceleration of convergence and the summation of divergent series	1	19
Stimpfl-Abele, G. and L. Garrido Fast track finding with neural networks	1	46
Moura, L. and R. Kitney A direct method for least-squares circle fitting	1	57
Karawatzki, R. A practical algorithm for the determination of the positions of superstable cycles	1	64
Drouffe, J.-M. and K.J.M. Moriarty Microcanonical simulation for the three-state Potts model	2	207
Lee, J.K. and C.K. Birdsall Particle–fluid hybrid simulations for weak beam–plasma interactions	2	214
Dubal, M.R. Numerical simulations of special relativistic, magnetic gas flows	2	221
Kasahara, K. A technique for reducing the computational time of electron–photon cascade-shower simulation	2	235
Šášik, R. and R. Černý Numerical solution of the non-isothermal moving boundary problem in heat conduction	2	241
Eastwood, J.W. The virtual particle electromagnetic particle-mesh method	2	252
Mertig, R., M. Böhm and A. Denner Feyn Calc – computer algebraic calculation of Feynman amplitudes	3	345

Computational physics (continued) *Issue* *Page*

Jamieson, M.J. and M.L. Du
Comments on the Numerov–Cooley and Hartree–Cooley methods for finding eigenvalues 3 360

Makino, J. and O. Miyamura
Generation of shift register random numbers on vector processors 3 363

Froese Fischer, C.
The MCHF atomic-structure package 3 369

Computer programs in physics

Kato, K. and T. Munehisa
NLLjet: a Monte Carlo code for e^+e^- QCD jets including next-to-leading order terms 1 67

Kasahara, K.
Tools for the analysis of air shower data 1 98

Kasahara, K. and S. Torii
A subroutine package for fast simulation of air showers and response of surface detectors 1 109

Eastwood, J.W.
ORTHOVEC: version 2 of the REDUCE program for 3-D vector analysis in orthogonal curvilinear coordinates 1 121

Godin, T.J. and R. Haydock
The Block Recursion Library: accurate calculation of resolvent submatrices using the block recursion method 1 123

Forcada, M.L.
PLEC: a program for building, modelling and optimizing polypeptide structures 1 131

Martinec, Z.
Program to calculate the least-squares estimates of the spherical harmonic expansion coefficients of an equally angular-gridded scalar field 1 140

Tanaka, H., T. Kaneko and Y. Shimizu
Numerical calculation of Feynman amplitudes for electroweak theories and an application to $e^+e^- \rightarrow W^+W^-\gamma$ 1 149

Youchison, D.L. and M.D. Nahemow
Ion Trajectory Analysis Program (ITAP) 1 167

Bargieł, M. and J. Mościński
C-language program for the irregular close packing of hard spheres 1 183

Bargieł, M., W. Dzwinel, J. Kitowski and J. Mościński
C-language molecular dynamics program for the simulation of Lennard–Jones particles 1 193

Jadach, S. and Z. Wąs
KORALB version 2.1. An upgrade with the TAUOLA library of τ decays 2 267

Computer programs in physics (continued)

	Issue	*Page*
Jadach, S., J.H. Kühn and Z. Wąs TAUOLA – a library of Monte Carlo programs to simulate decays of polarized τ leptons	2	275
Dubois, A. Fast routine for the evaluation of two-centre integrals in heavy-particle collisions	2	300
Clydesdale, G., R. Docherty and K.J. Roberts HABIT – a program for predicting the morphology of molecular crystals	2	311
Fernández Rico, J., R. López, M. Paniagua and G. Ramírez Calculation of two-center one-electron molecular integrals with STOs	2	329
Aldea, N. and E. Indrea Erratum notice. XRLINE, a program to evaluate the cristallite size of supported metal catalysts by single X-ray profile Fourier analysis (ABLL – CPC 60 (1990)155)	2	343
Froese Fischer, C. MCHF atomic structure package: support libraries and utilities	3	399
Froese Fischer, C. and B. Liu A program to generate configuration-state lists	3	406
Hibbert, A. and C. Froese Fischer A general program for computing angular integrals of the non-relativistic Hamiltonian with non-orthogonal orbitals	3	417
Froese Fischer, C. A general multi-configuration Hartree–Fock program	3	431
Hibbert, A., R. Glass and C. Froese Fischer A general program for computing angular integrals of the Breit–Pauli Hamiltonian	3	455
Froese Fischer, C. A configuration interaction program	3	473
Froese Fischer, C., M.R. Godefroid and A. Hibbert A program for performing angular integrations for transition operators	3	486
Froese Fischer, C. and M.R. Godefroid Programs for computing *LS* and *LSJ* transitions from MCHF wave functions	3	501
